Shaft protection sleeves

Model(s)	All models
Machine	All machines
Machine group	All machine groups
<p>The challenge</p> 	<p> Extensive wear due to inferior quality</p> <p>Shaft protection sleeves protect the shaft against damage, wear and corrosion. Friction between the shaft protection sleeve and the seal result in severe wear, causing massive leakage. Unscheduled downtimes are the result. Due to a lack of knowledge and experience in wear technologies, the quality of existing shaft protection sleeves is inferior and cannot guarantee trouble-free operation.</p> <div style="display: flex; justify-content: space-around;">   </div> <p>Worn shaft sleeves</p>
<p>The ANDRITZ solution</p> 	<p> Low-cost alternative with OEM quality</p> <p>ANDRITZ offers a low-cost alternative: high-quality shaft protection sleeves for all common sealing systems. The time-proven ANDRITZ technologies guarantee OEM quality for all standard applications and custom-tailored solutions for special requirements. All shaft protection sleeves can be supplied at very short notice.</p> <div style="display: flex; justify-content: space-around;">   </div> <p>New shaft sleeves</p>

Shaft protection sleeves

Benefits and features

More efficiency

- ▶ Lower acquisition costs
- ▶ Lower maintenance costs

Higher reliability

- ▶ OEM quality
- ▶ Scheduled changing intervals
- ▶ Specially coated shaft protection sleeve with greater wear resistance
- ▶ Many years of experience in coating technology

Better maintainability

- ▶ Longer service intervals
- ▶ Suitable for any sealing system

Higher productivity

- ▶ Optimized service life for all sealing systems
- ▶ Less downtime
